

With a straw
Have you ever tried drinking with a
straw? Most butterflies do it.
They have a long hollow tongue
which they use to sip nectar
from flowers.
Sounds great!

Look on the
back for more
food facts!

Thank you for visiting our museum café.
Please place your tray on the tray trolley, after use.

For children:

Always clean teeth

Have you heard about the living toothpick? It exists! The crocodile bird eats small bits of meat from between the crocodile's teeth. Happy bird, happy crocodile!

Share equally?

Who gets the most food in your home?

And who gets the best food?

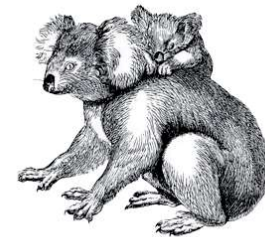

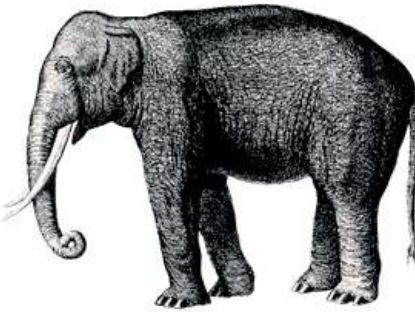

Your father, your mother or you?

Lions have that sorted out.

Daddy lion eats first, then mummy, and only then the children.

A lot

How much can you eat? Probably not as much as an elephant! It can eat 200 kilograms of leaves, carrots and fruit a day. A real vegetarian.

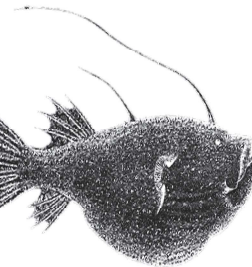

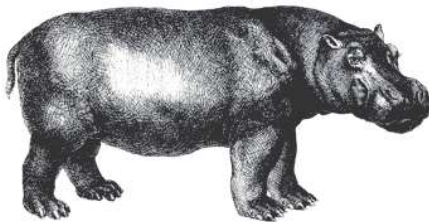

Always enough

Koalas sleep about 20 hours a day. When they aren't sleeping, they feed on the leaves of eucalyptus trees.

There are always more than enough leaves available, because they are poisonous to most other animals.

Fancy something tasty

A quick visit to the refrigerator at night? Craving food? You had better go back to bed, if you don't want to get fat. The hippopotamus, a real fatty, walks up to 30 kilometers every night to find food. That's how big his appetite is.

Care for some fish?

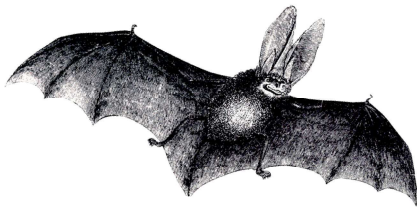

Get your fishing rod and go catch one.

Or go to the fish monger.

The anglerfish has a fishing pole on its head. The tip is bioluminescent and acts as bait to lure prey.

Tastes differ

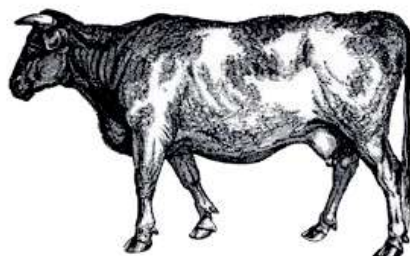

There are many species of bat. All of our native bats eat insects. In other parts of the world bats eat fruit or drink nectar. Vampire bats in South America feed on the blood of mammals.

Chew your food well!

Cows have learned to chew their food well.

Everything they swallow is chewed again. It's called chewing the cud.

Waste not, want not

When moles have had enough to eat, and they find another worm, they bite its head off. This way the worm can't escape and stays fresh. Clever!
